New features

Security configuration and replication

Highly improved configuration and replication of security settings. [More info](#)

Buffer sites

Great performance improvements when creating entity sites. [More info](#)

Master site synchronisation

Synchronise a single or all item sites with the master site. [More info](#)

Meta data inheritance

For easy population of documents with relevant data – e.g. publishing supplier information on a project site.

[More info](#)

Data aggregation

Data aggregation lets you aggregate data from a sub-list into module master page. This could for example be used for providing data for reporting purposes. [More info](#)

Field mapping

Set up "active items" and "my items" for quick filtering in WorkPoint Express. [More info](#)

Data import

New data import feature allows you to import or update your data in WorkPoint365. [More info](#)

Search panel improved

WorkPoint Server now features a brand new search interface, resembling WorkPoint Express, including type-as-you-go and results grouped by WorkPoint module. [More info](#)

Stage model

The new and improved stage web part gives users more flexibility and overview of their projects, by showing stage change dates and filter documents based on individual stages. [More info](#)

Standard web part design

All standard web parts in WorkPoint365 have been redesigned. [More info](#)

Lookup fields improved

The WorkPoint365 item lookup fields have been redesigned for improved usability. [More info](#)

Breadcrumbs

The WorkPoint365 breadcrumbs navigation has been improved for easier navigation. [More info](#)
