New features

Stage Gate Model

The WorkPoint Stage Gate Model has been greatly improved. It now supports different view options, as well as an improved graphic and easier navigation. The new stage gate design provides better options for managing projects and filtering content based on the stages. [More info](#)

Search panel improved

WorkPoint Server now features a brand new search interface, resembling WorkPoint Express, including type-as-you-go and results grouped by WorkPoint module. Favourites and History are included too. [More info](#)

Module structure

It is now possible to create “sub-sites” in the same module. For example create a hierarchy of sub-projects in the project module, or create a company concern structure with mother and daughter companies in the company module.

More pages on module sites

Now you can have more pages to display your content in a module.
