

Release notes April 2015 – WorkPoint365

This document covers new items released in WorkPoint365

Build 1.1.0.0

The release will be available in your existing WorkPoint365 solution to deploy from the administration interface on Tuesday 12 May.

New features

Manage the stages in WorkPoint365

The stage model known and loved from WorkPoint Server is now available in WorkPoint365. [More info](#)

(NOTE: Changing the stage setup requires admin privileges and substantial knowledge of how WorkPoint365 is configured. Modifying the setup without adequate knowledge might crash your application. Contact your WorkPoint reseller for assistance)

New stage model web part

WorkPoint365 now sports a brand new and improved graphical stage web part to display stages set on modules. [More info](#)

Support for WorkPoint template library

Access WorkPoint's central template library directly from WorkPoint Express. [More info](#)

Support for meta data tagging

You can now use SharePoint meta data tagging in WorkPoint365

Master site synchronisation

Master sites can synchronise data to module sites like WorkPoint Server on-premises.
