

### New features:

- [Support for SharePoint themes](#)
- [Advanced security rules](#)
- [Numbering service](#)
- [Stage environment](#)
- Support for WorkPoint mobile apps (Windows Phone):  
Get WorkPoint 365 data on your Windows Phone
- Support for SharePoint managed metadata:  
Now you can use SharePoint's manage meta data functionality when tagging WorkPoint 365 documents
- E-mail Manager 365:  
The very first version of our WorkPoint E-mail Manager, which has so far only existed on premises (<http://www.workpoint.dk/products/workpoint-email-manager>), is now an option in WorkPoint 365
- Light user:  
When you have users that do not need full access to the system, you can get light users, which are cheaper and have limited access

### Bug fixes:

- Feature: Tools to export a WorkPoint 365 solution to be imported into another site collection
- Feature: Rules to apply security to entities and entity sites based on rules
